

163-347.1

IN THE SPECIFICATION

Please rewrite the paragraph that begins on line 23, on page 5 as follows:

The structure of the multilayer product according to the present invention (C) (B)(A)(B)(C)(B)(A)(B)(C) comprises the coupling, on the two outer sides of the coupled elements, of the layers of light fabrics and/or covering vies fleece (D), thus obtaining a product with the following structure (D)(C)(B)(A)(B)(C)(B)(A)(B)(C)(D).

Please rewrite the paragraph that begins on line 5, on page 8 as follows:

In particular, in figure 1, 1 indicates the layer of spongy, semi-rigid polymer (A), inserted between two layers of resin 2 and 2' (B), and glass fibre 3 and 3' (C). 4 and 4' indicate the layers of light fabric or vies fleece (D), whereas 5 indicates the layer of glue (E) and 6 the lining material (F).

Please rewrite the paragraph that begins on line 21, found on page 11 as follows:

The lining fabrics of the panels obtained according to the present invention can either be coupled with sponges or with sponges and vies fleece and/or protective films, or covered with resins; it is also possible to use linings with plastic glazed products also coupled with various reinforcements and/or supports.
